Literature Review Guidelines (3-5 pages, single spaced, Times New Roman, font 11 or 12)

In this section, you will identify relevant related work and cite references as much as you can (atleast 5). Tell the readers what and how other people have solved the same problem and what you will be doing. Also tell the readers how your work is relevant to the previous ones or how you are going to use/apply/improvise their results in your work.

Every single source you refer should have the following:

- Title of the article/publication/url/book chapter/etc...;
- A paragraph explaining what the work is all about;
- A paragraph highlighting the strengths of the work done;
- A paragraph highlighting the weakness of the work done; and
- Finally, how your proposed work does aligns or relate with the existing work.

Provide a list of all references at the end.
